SECURITY TECHNOLOGIES

THE EXPERTS IN PROTECTION

A stylized graphic of a handprint, composed of a grid of white squares, is superimposed on a network of white lines and dots. The background is a light blue gradient with a subtle grid pattern. The graphic is positioned in the upper right quadrant of the page.

Secure Intelligent Access Systems

SIAS

Secure Intelligent Access Systems

SIAS

SUMMARY

SIAS smart key technology will eliminate the need for you to ever change another lock or lose time and money waiting for new keys. All of your locks can be retrofitted with a smart core and easily programmed to a smart key with the use of your computer or phone at a fraction of the cost of traditional key cards and wired set up.

Now, you can enjoy smooth transitions when employees leave or lose a key. With a few keystrokes on your device, you can program a new key, change permissions and continue with your with your day. Imagine taking a few stress-less minutes to fix an issue that used to take hours of stress, too much unplanned money spending and days to fix. SIAS can give you that peace.

FITS ANYWHERE

Retrofits In any door, panel or file cabinet.

FUTURE PROOF NO RE-KEYING

No more lock replacement.

ACCESS CONTROL ATTRIBUTES

10% of the costs.

LOWER LIFE-CYCLE COST

Manage access based on users profile.

USER IDENTITIES ARE TIED TO KEY

Removes Unauthorized Access

OVERVIEW

The VeraPass system is unique and innovative. It enables organizations to transition from the traditional mechanical lock and key, to a sleek and seamless electronic lock and key system. The transition is simple, the system is reliable and utilizes the existing door hardware.

SIAS offers benefits reserved for expensive access control systems, for a fraction of the cost. Organizations that upgrade to SIAS can remove all costs associated with future cutting of keys, issuing keys, and replacement of locks.

SIAS system is a comprehensive lock & key management system that improves efficiency and removes security vulnerability associated with government buildings.

USER

Each user receives a key with his or her access privilege.

KEY

Each key holds user's profile, recording all entry attempts and downloading data to kiosk.

LOCK

The lock is programmed to grant secure access through the system's software.

KIOSK

Docking stations charges keys, authenticates user profiles and collect data.

USER

Integrated system configures and manages user profiles, keys and analytics through a single location or a network of locations.
